

CRF Diskette Problem Report

The Scientific and Technical Information Center (STIC) experienced a problem when processing the following CRF diskette:

Application Serial Number: 695, 201A

Filing Date: 5/2/91

Classification: 435

Date Received by STIC: 6/10/91

Date Processed or Reviewed: 6/11/91

Point-of-Contact / Telephone No: Meredith Charak
703-308-4224

Nature of Problem:

The CRF diskette was damaged or unreadable. (Explanation optional: See attached)

A computer virus was detected on the diskette. The STIC will not process the diskette through the Data Capture System.

The CRF diskette contains an error that disrupts normal processing, as explained below:

The Sequence Listing was not converted into ASCII (DOS) text

(See reverse side for details)

Your disk was found to be "unreadable" by PTO's CRF computer. Past applicants have also had this problem because they formatted their low density disk in a high density drive, or vice versa. Please take care when formatting your disks by formatting them in the appropriate drive and/or by using the suitable commands.

Any questions can be directed to Meredith Charak at 703-308-4212.
